

Rinnai

Gas Fireplace and Home Heating Collection

Rinnai is passionate about bringing you the best possible fireplace performance and ambience. By combining leading technology with design inspired by New Zealand landscapes and architecture, we've made that happen. Manufactured right here in New Zealand, all Rinnai fireplaces reflect our unique Kiwi

way of life and perform to our exacting standards. Rinnai gives you the gift of fire. Enjoy.

Ray Ferner
Managing Director

AT RINNAI, WE'RE YOUR TOTAL HOME LIVING EXPERTS

For over 45 years, Rinnai has supplied New Zealanders with a wide range of appliances to make kiwi homes and workplaces more comfortable, safe and efficient.

Rinnai New Zealand is a subsidiary of the Rinnai Corporation, which was founded in 1920 in Japan as a manufacturer of gas and oil appliances. In New Zealand, we're located at our purpose-built site at Pavilion Drive, Mangere. It's here that we design and build many of our appliances – so they're especially suited to New Zealand conditions.

We're probably best known for our iconic water heating solutions for kiwi homes and were the first to introduce gas continuous flow to New Zealand.

We're also one of the industry leaders in home heating. We have a huge range of fireplaces, as well as heat pumps, ducted systems and radiant heaters.

So whether you want to heat one room or the whole house, there's a Rinnai solution for you.

Of course you might want to keep the temperature down in your home too. Which is where you can turn to Rinnai for air conditioning (or heat pumps) that cool your rooms in summer, as well as ducted air conditioning to cool the whole house.

And let's not forget our commercial solutions used widely through schools, government buildings, apartments, offices and sports facilities, as well as hotels and commercial kitchens.

Rinnai has a nationwide team of service professionals who are fully trained and equipped with diagnostic tools to service your appliance, so you get a true end-to-end service with Rinnai.

With over 1 million appliances sold into Kiwi homes and businesses over the past four decades, it's no wonder Rinnai has established a proud reputation for quality and reliability. And why we've become known as your total home living experts.

THE LINEAR COLLECTION.

FIRE. REIMAGINED.

For our latest range of premium gas fires, the Linear Collection, Rinnai's designers took their inspiration from Aotearoa's unique landscapes. They hand-selected driftwood washed up on our wild West Coast beaches, and stones to match those shaped by our rivers and tides. These were painstakingly recreated as perfectly lifelike ceramics.

Rinnai's engineers then reinvented gas fire technology so flames burn more realistically and embers glow more brightly. Finally, they captured the flames in frameless panoramic enclosures, leaving next to nothing between you and the flickering warmth. The end result is the all-new Linear gas fire collection from Rinnai.

THE LINEAR COLLECTION.

FLAME. REIMAGINED.

Rinnai's engineers have completely reinvented gas fire technology to achieve even more lifelike fires. With FlameTech, flames emanate from the logs themselves just as they do in real life. Flames also burn more realistically thanks to a class-leading flame height.

The new technology even extends to the embers, allowing them to glow more brightly and naturally. All in all, these Rinnai fires look and feel more like real fires than ever before.

THE LINEAR COLLECTION.

NATURE. REIMAGINED.

Taking inspiration from Aotearoa's unique landscapes, Rinnai's designers have created highly realistic logs and stones for our fires. They hand-selected driftwood washed up on our wild West Coast beaches, and

stones to match those shaped by our rivers and tides. These were both painstakingly recreated, down to the smallest details, as perfectly lifelike ceramics.

FORM. REIMAGINED.

To give you the feeling of an open fire with the safety of an enclosed fire, the flames are captured in frameless glass.

It leaves next to nothing between you and the flickering warmth.

THE LINEAR COLLECTION.

SEEING. REIMAGINED.

To give you the very best view of your Rinnai gas fire, the glass in all models has an anti-reflective coating. It's also

removable, which means it's easy to clean – to keep the view of your fire as pristine as possible.

ENGINEERING. REIMAGINED.

The Linear Collection of gas fires are all designed and made right here in New Zealand. With qualities such as a C-frame chassis for superior

strength and laser-cutting for absolute precision, the quality is understandably second to none.

LINEAR COLLECTION .

LINEAR 800 DOUBLE-SIDED

With its eye-catching double-sided design, this beautiful 800mm fire is sure to become the centrepiece of your home. It also features FlameTech, Rinnai's clever new technology that

makes your fire burn more realistically than ever before – from flames that emerge from the logs themselves to embers that glow just like the real thing.

Available Options -
Side panels: Reflective glass as shown or standard ceramic.
Media: FlameTech.

LINEAR COLLECTION .

LINEAR 1000 DOUBLE-SIDED

The hardest decision you'll have to make with this metre-wide fire is deciding which room you'll enjoy it from most. With two sides, it offers

twice the pleasure – from the cosy warmth to the pure aesthetics of this highly realistic-looking fire.

Available Options -
Side panels: Standard ceramic as shown or reflective glass.
Media: Designer log set or modern media.
Compare range and specifications on page 58.

LINEAR COLLECTION .

LINEAR 1000 SINGLE-SIDED

Sitting right in the middle of the Linear collection, this beautifully proportioned fire will become the focal point of any room.

Its generous one metre width gives it plenty of presence, as well as plenty of heat to warm your home.

Available Options -
Side panels: Reflective glass as shown or standard ceramic.
Media: Designer log set or modern media.
Compare range and specifications on page 58.

LINEAR COLLECTION .

LINEAR 1500 DOUBLE-SIDED

At one and a half metres wide, this is a truly impressive-looking fire. Add to that the fact it's double-sided and you have a fire that's a shining example

of the wow factor. This is not just a means of heating your home, it's an architectural statement.

Available Options -
Side panels: Reflective glass as shown or standard ceramic.
Media: Designer log set or modern media.
Compare range and specifications on page 58.

L I N E A R C O L L E C T I O N .

LINEAR 1500 SINGLE-SIDED

A room with substantial proportions needs a fire to match. At one and a half metres wide, this is the perfect fire. But scale isn't all it offers. With ceramic wood painstakingly created to

precisely match the driftwood found on New Zealand's West Coast beaches, this is nothing short of a beautiful-looking fireplace.

Available Options -
Side panels: Reflective glass as shown or standard ceramic.
Media: Designer log set or modern media.

FLUE SYSTEMS

Each Rinnai gas fire has a specific flue configuration. To understand the three different flue types, view the information below.

Natural draft

Often referred to as a standard flue system. This type of flue draws the air for combustion (to run the fire) from the room and then expels combusted gases to the outside via a vertical flue. As the air for combustion is being drawn from the room, there is a requirement for adequate ventilation – requirement to replenish the air. Adequate ventilation must be calculated and provided by the gasfitter, as per AS/NZS 5601.

The flue must terminate vertically through the roof.

Power flue

A Rinnai power flue system has a sealed combustion chamber with a fan that draws air for combustion from the outside, through the outer flue, and expels combusted gases to the outside, through the inner flue. This type of system does not take oxygen or heated air from the room.

Power flues are smaller in size, can have a number of bends, can be flued down-and-out, sideways, and can terminate horizontally or vertically. This means power flued appliances can be installed in almost any living or working space, including bedrooms.

Rinnai power flued appliances maintain air quality for a healthy breathing environment.

Direct vent

A direct vent flue system, like the power flue, also has a sealed combustion chamber, but differs by using natural draft to draw air from the outside and expel combusted gases to the outside. Like the power flue, the air quality of the room is maintained.

As direct vent flues use natural draft to move air and gases through the flue, they have a larger flue size compared to the power flue.

The flue can terminate horizontally or vertically.

FLUE GUIDE

This flue guide showcases which flue system each fire or Energysaver uses and some of the different options for configuration.

Natural draft

Available for: Neo, Compact 2

Power flue

Available for: Linear Collection, Evolve 952/1253 Plus, Arriva 752, Energysavers

Direct vent

Available for: Ember 600/700, Symmetry, Novo*

* Vertical termination only

Room Sizing calculation based on construction and insulation prevalent in homes built post 2008. Calculation assumes a 2.4m stud height, with normal sized windows. For rooms outside of these assumptions or for older homes the floor area able to be effectively heated will reduce.
 ~ If the existing masonry chimney had a very large opening then this is possible. Otherwise it will require significant renovation and installation costs.
 *Running on NG using short flue. **Running on NG using long flue.

Climate zones

This diagram shows nationwide winter climate zones. It's important to correctly identify your climate zone, as it directly affects the performance of your heating solution.

100% Kiwi

Our gas fires are all designed and manufactured right here in New Zealand. So you can be sure you're getting the best quality, made in the best little country on Earth.
