

Symmetry RDV3611 reflective panel kit installation

R3617: Symmetry reflector panel kit - brushed stainless steel

R3618: Symmetry reflector panel kit - mirrored finish

Kit contents: Left hand panel, right hand panel, instruction sheet, ezi-wipe clean sachet

The below instructions are based on the panels being installed at same time as the Symmetry unit. If they are being fitted retrospectively refer to the maintenance manual (available online) for instructions on how to dismantle the appliance.

The reflective panels are designed to slide in and cover the existing ceramic panels. The ceramic panels remain in place inside the unit.

The left and right reflective panels can be identified by the angle on the front edge.

Slide the panel into place by positioning the return fold on the top edge of the panel on top of the air guide, it will drop down slightly (approx. 12 mm). This will keep the panel suspended in place.

The panel needs to be positioned so that the back face of the angled front edge meets the front face of the ceramic panel (refer photo on back page).

Once the panels are in place, use the stainless steel ezi-wipe supplied in the kit to wipe off any fingerprints or smears.
