

Pinecone Accessory Kit (R2906)

Elevate the aesthetics of your Rinnai gas fireplace with our **Pinecone Accessory** kit. Designed with meticulous attention to detail, these specially moulded ceramic pinecones (two small, two medium, and one large) look just like the real thing to bring the ambience of a woodland bonfire straight to your living room.

- The pinecones have been specially moulded to Rinnai specifications—do not mix with any other branded burn media, this will void any warranty.
- Never use natural pinecones, these are not heat tolerant and will cause a cause a fire.
- Gas fire models: Do not to place the pinecones directly over the flame as this will affect the flame picture and combustion.

Suitable for the following Rinnai fires:

- Linear gas fires, all log set models
- Evolve 952 / 1253
- Symmetry
- Electric fires (all models)

Not suitable for smaller Rinnai fires as the burner space within the fire is too small.

Installation is easy. However, if retrofitting to a gas fire, a licensed gasfitter is required as the glass will need to be removed and the fire operation rechecked with the pinecones in place.

The information and images shown are recommendations for achieving the best flame picture.

Linear fires - one sided

Evenly space in front of the logs, either side of the centre log. The fifth pinecone can be placed slightly behind the left hand side log.

Linear fires - double sided

Place three on one side and two on the other. It may be possible that one pinecone can be viewed from both sides (circled below).

Evolve 952 and 1253

For the Evolve 952 you may not need to use all five pinecones.
