

Timberflame Compact IBF

Market release: 2009

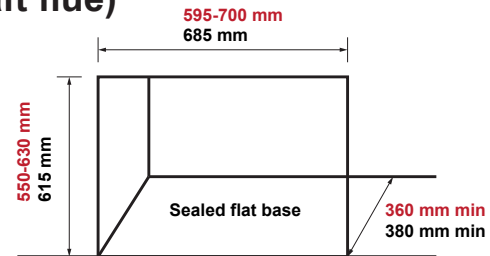

Discontinued: 2014

The Timberflame Compact was replaced by the Compact 2 which features a more modern aesthetic. The manual controls for the fire are still located at the base of the fire. Always consult a licensed gasfitter to determine suitability of replacement product.

Compact 2 (natural draft flue)

Comments

Red (upper figures) are for a masonry enclosure. Masonry enclosure dimensions are marginally smaller due to the flexi flue connection.

Other inbuilt fires are not suitable due to their larger minimum depth requirement.

Depending on the cavity some enclosures can be modified to suit.
