

Electric ES Series fires

Supplementary information: Cladding

The below photos, highlighting a build in a showroom, show additional details on how to clad around the fire:

- **Example 1**
Building a frame to enable the cladding edge to be fitted against the lip/trim of the fire, or
- **Example 2**
Creating a return with the cladding material. If a return is used it **MUST** be a non-combustible material around the heater grille.

Example 1: Cladding against fire lip
