

Environmental policy

Rinnai New Zealand recognises that environmental protection is a vitally important social and economic issue. Here at Rinnai New Zealand, we are committed to sustainable business practices to safeguard the environment and natural resources for future generations.

Rinnai New Zealand is part of the global Rinnai Group, who are proactively working on decarbonisation and the reduction of greenhouse gas emissions across the group to achieve the Rinnai Group goal of carbon neutrality by 2050.

As a pathway towards this goal, Rinnai New Zealand is committed to achieve a 50% reduction in emissions by 2030. Rinnai are actively involved in investigating how renewable gas can help to achieve this goal.

Rinnai New Zealand will commit the necessary financial and human resources to effectively measure and manage our environmental responsibilities and will ensure that protecting the environment is a key consideration in our work practises, processes and methods of operation.

Rinnai New Zealand will:

- Identify, monitor, and quantify all environmental targets consistent with legislative and compliance requirements, and moral and social responsibilities
- Adopt a philosophy of continuous improvement to manage all environmental impacts
- Integrate environmental objectives into relevant business decisions in a cost-effective manner
- Minimise waste and to recycle wherever this is economically practical
- Ensure that our emergency response plans will effectively limit any negative environmental impact
- Ensure all staff are trained in environmental awareness and encouraged to bring ideas that lessen our environmental impact
- Influence wherever possible, our business partners to minimise our collective environmental impact
- Commit to meeting the environmental objectives established by the Rinnai Corporation
- Commit to achieve and meet the requirements of the ISO 14001 standard
